The present \invention provides monoclonal antibodyproducing hybridomas designated 27.F7 and 27.B1. invention provides a method of detecting TIP-2 antigen bearing cancer cells in a sample. The invention provides a method of detecting TIP-2 antigen on the surface of The invention provides a method cancer cells. diagnosing cander in a subject. The invention provides a method for delivering exogenous material to TIP-2 antigenbearing cancer cells of a human subject. The invention provides a method for treating cancer in a human subject. The invention provides isolated peptides having the amino acid sequences Lys Leu Leu Gly Gly Gln Ile Gly Leu (SEQ. ID) and Ser Leu Leu Gly Cys Arg His Tyr Glu Val (SEQ. invention provides а method immunohistochemical screening of a tissue section for the presence of TIP-2\ antigen bearing cancer cells. The invention provides a kit for detecting the presence of TIP-2 antigen-bearing cancer cells. The invention provides a method for detecting the presence of TIP-2 antigen. The a method for immunohistochemical invention provides \ screening of tissue\sections. The invention provides a method for monitoring progression of cancer wherein the cells are TIP-2 antigen-bearing cells. The cancer provides method for diagnosing associated with the expression of TIP-2.
